The Ladder M8rix™

Never climb a ladder again without one!

The Ladder M8rix™ is a simple safety device that sits under the feet of your ladder, preventing it from slipping.

Made from durable moulded Polypropylene, the safety device consists of a two stainless steel plates secured by galvanised topping screws. The fine metal grips situated on both sides of the Ladder M8rix™ hold the ladder feet in place, whilst preventing any slippage on the ground surface.

- Local Authorities have given the Ladder M8rix™ stringent Health and Safety tests and now have stipulated that a safety measure of this kind should be made available for ladder workers to reduce the list of injury.
- Ladder M8rix™ has been voted Best New DIY, Home Improvement and Garden Tools Product at the GLEE 2003 Exhibition at the NEC in September 2003.
- Approved and adopted by the UK's leading telecomms companies to prevent accidents in the workplace.

According to the [DTI](#), one person a week is killed in accidents involving ladders and another 40,000 a year require hospital treatment. Ladder M8rix has the following benefits:

- Feel confident about your safety on ladders
- Ladder M8rix™ has passed stringent Health and Safety tests
- Light, easy to carry and easy to use
- No need to have another person to hold your ladder safe
- Equip your workforce with the Ladder M8rix™ and prevent employee injuries (and injury claims!)
- Comes complete with robust moulded protective carrier case

Whilst we would not recommend unwise ladder use, the Ladder M8rix™ provides such a high degree of security that it can even be used on such surfaces as:
