The Multistopper

The MS24 base is for Industrial/Trade use, is suitable for ladders up to 22 inches (55cms) wide and can be used with or without Stopper Feet. Stopper Feet with integrated stile extenders can be fitted permanently or temporarily to any ladder and can be used with or without the MS24 base. The Stopper Feet help prevent bottom slip on all surfaces including uneven ones.

When the Stopper Feet are used in conjunction with the MS24 it becomes the MultiStopper System which:-

- Helps prevent bottom slip
- Helps prevent top movement
- Levels on all surfaces; uneven, sloping, and with insert can be used on stairs
- Fastens the Stopper base to the ladder

The Multistopper System consists of a Stopper that has a channel in its middle rather than an upright "fin". The ladder has attached to it a pair of stile extenders, which are completed by means of a pair of Universally jointed round Stopper feet. These large feet (4 inches in diameter) slot into the channel of the Stopper, which "captures" these feet.
