## The Ankalad Ladder Stabiliser

An Ankalad Stabiliser secures a ladder in much the same way as stabilisers secure a child's first bike.

Correctly positioned it's impossible for the ladder to slide down the wall or side over sideways due to over-reaching - which is the real killer and cause of 9 out of 10 accidents.

Ankalad weighs just 3.6kg (8lbs) and is built to a high quality using the finest materials, namely anodised aluminium, zinc plated steel, brass, stainless steel and nylon mouldings.

***If you use ladders, or if you employ people to use your ladders, can you afford NOT to use Ankalad?***

- Fits any wooden or aluminium ladder of 1, 2 or 3 sections
- Very high quality
- Extremely strong, yet very light
- Provides a safe reach of up to 26ft against a solid structure and up to 14ft free standing
- Folds away flat when not in use
- Adjustable telescopic legs with easy find locking buttons to cater for un-even ground
- Totally eliminates ladder 'bounce'
- Makes extending your ladder much easier
- Will TOTALLY stop your ladder from sliding down a wall or toppling sideways

**We are able to supply trade quality ladders, 2 or 3 section push-up, fully fitted with the Ankalad Ladder Stabiliser and/or Leveller. Please enquire for the size you would like.**
