The Topmate

Topmate is an industrial strength ladder stand-off designed to make ladder work both safer and easier.

- High friction rubber wheels allow **easier ladder extension** and increased **resistance to sideway slip** whilst preventing damage to building exterior.
- 700 cms span in contact with wall offers **greater sideways stability**.
- Designed to **span down pipes**.
- Provides a 20cm "stand off" to offer **easier sill and gutter access**.
- **Easy to assemble** – **Topmate** comes in 2 sections, which require initial assembly with 2 bolts. After that they are permanently ready for use.
- **Easy to attach to a ladder** – simply hook over the top rung and fasten with the "j" bolt on the second rung.
- **Fits all ladders** with rung centres of 23-30 cms.

It is strongly recommended that when using **Topmate** it is used in conjunction with **Laddermate** to create a safety system.
